

It's time for a quicker, more accurate syringe filling process

Manually filling syringes is inaccurate and painfully slow. Instead, speed up your filling process with a Tridak semi-automated filling system. The Tridak Model 1001 is specially designed for use in low-volume production or as an alternative to filling systems manually. It can be used to fill 1-60 mL syringes with fluids up to 60,000 cP, one at a time, quickly and accurately. The system is manually loaded and unloaded, and is operated with just a push of a foot switch. [Find out more...](#)

Tridak Partners with ManTech Sales

For over 20 years, [ManTech Sales](#) has been helping customers improve the quality, efficiency, and productivity of their material applications. We are happy to announce that they will now be partnering with Tridak to help customers overcome process challenges regarding material transfer and syringe filling.
