## Introducing the Tridak® Model 1060 Filling System

Fast, Easy Filling of 30-900 mL Syringes and Cartridges

We are excited to announce the addition of our new **Model 1060 system** to the Tridak® product line. This semi-automated filling system quickly and accurately fills syringes or cartridges, sizes 30-900 ml, and can handle a number of different fluids in the 1-60,000 cP viscosity range. It is manually loaded and unloaded, making it ideal for low-volume production or as an alternative to manual filling. The system has a small footprint and utilizes a foot switch for hands-free activation. Visit our website to find out more about this new system and to see it in action in one of our new videos.

Interested in a Custom Filling System?

While our standard systems are a good fit for many applications, we understand that sometimes something more customized many be needed.

At Dymax, we have the know-how and engineering capabilities to design and manufacture a filling system tailored to your needs. Our systems range from semi- to fully-automated, and integrate features like labeling, weight verification, and other quality checks to increase throughput and improve quality.

If you need a custom system, set up a time to talk to one of our system integration specialists. The consultation is free with no obligation to buy.
