

**Reliable Filling
Without the Worry of
Cross-Contamination**

Filling Systems with Disposable Fluid Path Technology

When using a Tridak filling system, you won't have to worry about cross-contamination. Unlike other filling systems, ours utilize unique disposable fluid path valves to fill syringes and cartridges. This technology eliminates cross-contamination and minimizes clean-up and downtime during product changeover. Visit www.tridak.com to learn more about our systems and disposable fluid path technology.

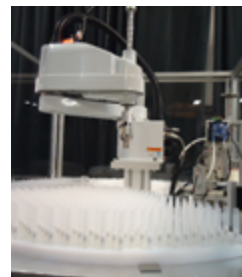

Increase the Efficiency of Your Manual Filling Process

Are you still manually filling syringes? Manual fill processes can be slow and inaccurate, really driving down efficiency. Tridak filling systems are an excellent alternative to manual fill processes, increasing fill speed, throughput, and accuracy. We offer semi-automatic, bench-top filling systems that are easy to learn and operate without the headaches that come with large, fully automated systems. [Can one of our systems improve your process?](#)

Customized Filling Systems for Syringe, Cartridge, or Pen Filling Applications

We offer custom filling systems for companies that require more advanced features integrated into their process. System features like automated labeling and sensor and load-cell technology, which weighs, fills, and verifies volumes and weights, are available as well as many other features that help manufacturers create more consistent filling processes that increase productivity and improve quality. [Watch our video](#) to see a Tridak custom gel pen filling workstation that increased one manufacturer's productivity 10X.
