Model 1050 Now Compatible with Gel Dispensing Pens

The [Tridak Model 1050 filling system](#) is a bench-top unit designed to fill syringes, one at a time, quickly and accurately. With the design of a new nozzle, this system can now fill gel dispensing pens, like those used for cosmetics, ointments, and many other applications. The Model 1050 is ideal for fluids having a viscosity of 1-60,000 cPs and features adjustable suck-back so even stringy and tacky materials are cleanly dispensed. See how quickly this system fills a gel dispensing pen in this [short video](#).

Coming Soon: Improved Tridak Model 2400 System

We are excited to announce that an upgraded version of the Tridak Model 2400 will be released in the upcoming months. The [Tridak Model 2400 system](#) is a bench-top filling system that uses a forced convection oven to accurately fill packages with extremely high-viscosity materials such as dental composites and restoratives. The new version of this system will feature a number of improvements, including electrical upgrades, a through wall air pressure regulator for the hydraulic pump, and safety upgrades including an emergency off switch, interlocks on all covers, and improved safety labeling of hot surfaces, pinch points, etc. Contact [Tridak customer service](#) for more information.
